

# Tammiey's Design Website

## Web Design & Development Proposal

### Project Overview

This proposal outlines the redesign and development of Tammiey's Design website, a bespoke tailoring atelier based in Potchefstroom, South Africa.

The new website showcases the craftsmanship and cultural heritage embedded in each custom garment, featuring a streamlined navigation structure and refined visual identity that reflects the brand's commitment to precision tailoring and South African textile traditions.

### Site Structure & Navigation

The website follows a user-centric navigation structure:

| Page     | Description                                                                      |
|----------|----------------------------------------------------------------------------------|
| Home     | Hero cover with brand introduction and scroll-to-content call-to-action          |
| About    | Story of the atelier, craftsmanship philosophy, and cultural heritage references |
| Services | Custom tailoring, alterations, and bridal services with consultation booking     |
| Contact  | Contact form, location, hours, and social media links                            |

### Deliverables

- ✓ Responsive HTML5 homepage with CSS styling
- ✓ Brand logo integration and visual identity
- ✓ Optimized navigation structure (Home → About → Services → Contact)
- ✓ Section-based content layout with reveal animations
- ✓ Light/dark theme toggle functionality
- ✓ Mobile-responsive design for all devices

### Wireframes & Information Architecture

Wireframes have been developed to map the user journey and content hierarchy across all pages. Each wireframe shows:

- Header/navigation positioning and layout
- Content section hierarchy and spacing
- Call-to-action placement for consultation bookings
- Mobile breakpoint adjustments
- Visual asset placement (hero images, product photos, testimonials)

Wireframes are available as separate SVG/PDF files and show desktop, tablet, and mobile viewports.

### Sitemap & Navigation Flow

The sitemap outlines the complete information architecture and navigation hierarchy:

HOME (Landing page with hero section)

- ├ About (Story, team, heritage, philosophy)
- ├ Services (Tailoring, alterations, bridal, consultation)
- ├ Contact (Contact form, location, hours, social links)
- └ Admin Pages (Internal use: form submissions, email notifications)

The navigation is streamlined and intuitive, reducing cognitive load for visitors seeking specific services or information about the brand.

### Customer Reviews & Testimonials

Client testimonials build trust and showcase the quality of work. The website includes a dedicated testimonials section featuring:

- Client name and service type (e.g., 'Bridal Gown', 'Corporate Alterations')
- 5-star rating display
- Customer feedback highlighting precision, attention to detail, and cultural authenticity
- Photo of the finished garment (with client permission)
- Quote carousel for visual impact and engagement

Sample testimonials to include:

| Client Name & Service     | Testimonial                                                                                              |
|---------------------------|----------------------------------------------------------------------------------------------------------|
| Naledi K. – Bridal        | The precision and cultural detail in my wedding dress was breathtaking. Every stitch told a story. ★★★★★ |
| Thabo M. – Corporate Wear | Perfect fit, perfect service. My blazer feels like it was made for me. ★★★★★                             |
| Amara L. – Alterations    | Fast turnaround, flawless work. Tammiey's Design exceeded my expectations. ★★★★★                         |

### Technical Specifications

Technology Stack:

- HTML5 — semantic markup and accessibility
- CSS3 — custom styling with CSS variables, animations, and responsive design
- JavaScript — smooth scrolling, theme toggle, form validation
- Intersection Observer API — scroll-triggered reveal animations

Performance Features:

- Optimized image lazy-loading
- Light/dark theme toggle with localStorage persistence
- Mobile-first responsive design (375px–2560px viewports)
- Smooth scrolling and reveal animations for enhanced UX

### Next Steps

1. Confirm wireframes and sitemap structure
2. Gather customer testimonials and reviews
3. Provide product photos for portfolio/gallery sections
4. Set up contact form backend and email notifications
5. Test across all devices and browsers
6. Deploy to hosting platform

For questions or revisions, please reach out. We look forward to launching Tammiey's Design online.
